Research engineer focused on evaluation and scaling of **multi-agent LLM systems**. Built RL fine-tuning pipelines and **distributed experimentation infrastructure** (10+ 8×A100 nodes) for personalization and autonomous research agents. Published at **WACV and ECCV**; currently working on **evals and benchmark design** and process rewards for long-horizon agent reasoning.

PUBLICATIONS

Benchmarking the Personalization Capabilities of Large Language Models [Project Page](#)

Manuscript under review (2026)

SDR-Arena, the first scalable benchmark for evaluating personalization in LLM-based sales agents, grounded in **Bayesian Persuasion theory**. Curated a **dual-layered dataset** of **6,279 industry-specific success stories** and proprietary sales outreach emails.

ReEdit: Multimodal Exemplar-Based Image Editing with Diffusion Models [Project Page](#)

WACV 2025

A diffusion based modular and efficient end-to-end **image editing framework** that captures edits in both text and image modalities while ensuring the fidelity of the edited image. Released **ReEdit Bench** dataset and achieved **SOTA scores** on image editing metrics with our framework.

Towards Efficient Exemplar Based Image Editing with Multimodal VLMs [Arxiv](#)

AI4VA - ECCV 2024

An **optimization-free** method to perform end-to-end edit intent capturing and image editing. Our method outperforms baselines on multiple types of edits while being **4x faster**.

WORK EXPERIENCE

AI Research Associate - [Adobe Research](#) Jul 2025 - Present

- **Founding Engineer - Sales Qualifier Agent:** Built and productionized an AI agent performing automated prospect research, qualification, and personalized outreach generation across enterprise accounts.
- **0→1 System Ownership:** Led problem formulation, dataset design, model experimentation, evaluation benchmarking, and infra deployment. Pilot program resulted in **15% increase in outreach volume** and **5% increase in engagement**.
- **SDR-Arena and Historical Internet Simulator:** Developed the first benchmark and dataset to measure at-scale personalization capabilities of **Deep Research agents** for B2B Sales. Created a historical internet simulator for benchmarking Deep Research Agents.
- **Large scale experiments:** Provisioned and orchestrated **10+ 8×A100 GPU nodes** for RL fine-tuning and large-scale multi-agent experimentation.

Research Intern - [Trinity College Dublin](#) Jan 2025 - Mar 2025

- Developed **RadBot**, a multimodal vision-language framework for automated brain tumor segmentation and survivability prediction on the **BraTS dataset**.

Platforms Engineering Intern - [Abacus.AI](#) Oct 2024 - Feb 2025

- Implemented infrastructure like **Redis** for caching, **K8s** for **clusters** and **microservices**.
- Created 3rd party connectors like Box, PostgreSQL for interacting with the platform via private/public networks.

Research Intern - [Adobe](#) May 2024 - July 2024

- Designed and implemented a novel **Stable Diffusion-based image editing framework** leveraging multimodal VLMs; published at **ECCV (AI4VA)** and **WACV**.

Security Internship - **CloudDefense AI**

Dec 2023 - Feb 2024

- Worked on DSPM model for cloud DB security in Go.

EDUCATION

Indian Institute of Technology (IIT), Roorkee

(2021 - 2025)

Bachelor of Technology in Mechanical Engineering

PROJECTS

RLMs: Add optimizations to Recursive Language Models

[GitHub](#)

Implemented parallel RLM subcalls to decrease execution time (1.5x to 3.0x faster) for independent rlm_sub_queries. Experimenting with creating dependency aware graphs for RLM subcall trajectories.

RusticOS: A systems software with a modular kernel written completely in Rust

[GitHub](#)

Implemented privilege separation (ring 0 / ring 3) and syscall interface via page table flag manipulation in a modular Rust-based OS.

VortexDB: A high performance vector database written in Rust

[GitHub](#)

Designed the whole architecture for the project from scratch. Led the team of computer science undergraduates from SDSLabs. Developed the core DB Engine and Vector Indices for storing and querying high-dimensional embeddings.

Katana: A ready-to-deploy attack and defense CTF platform

[GitHub](#)

Built a Kubernetes-based attack-defense CTF platform with namespace isolation, automated infra provisioning (MongoDB/MySQL), and health-check cronjobs for real-time challenge monitoring.

ACHIEVEMENTS

1st Place (Research Track), CSAW

Nov 2022

Embedded AI Security Challenge – New York University

1st (India), 13th (Global) – CSAW CTF

Sep 2024

Qualification Round – New York University

EigenLayer Infinite Hackathon Prize

Dec 2024

ValidAI – Decentralized AI AVS

NEAR REDACTED 2024 CTF 1st Prize

Nov 2024

Bangkok, Thailand – NEAR

GIAC Foundational Cybersecurity Technologies Certification

Jun 2023

SANS Foundation

2nd Place (India), DSCI Hackathon CTF

Dec 2022

Data Security Council of India
